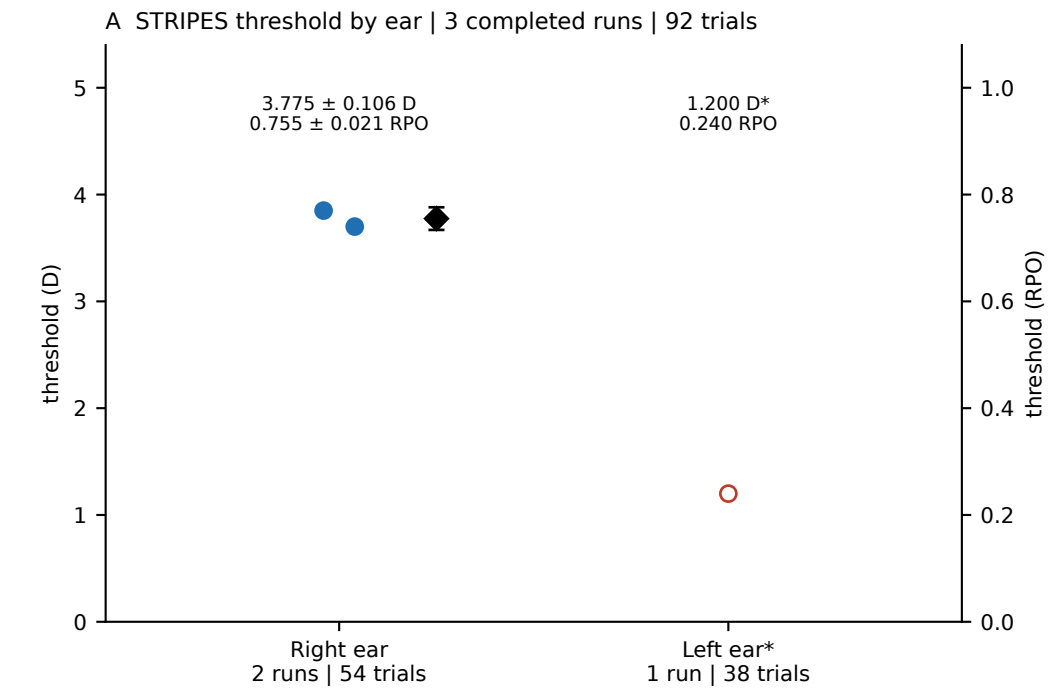
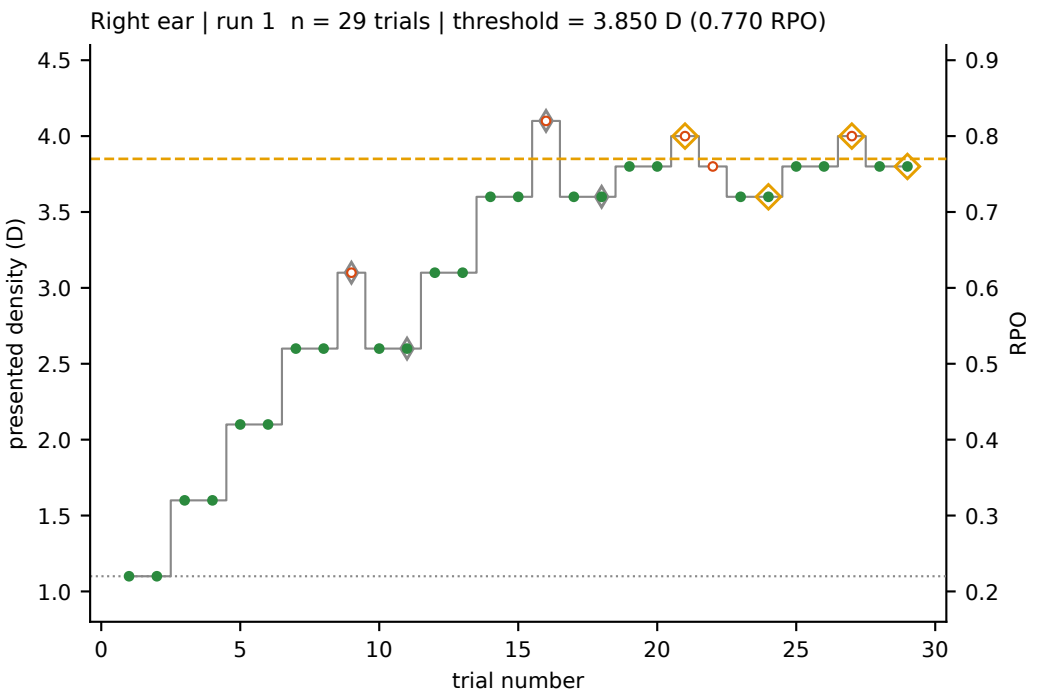
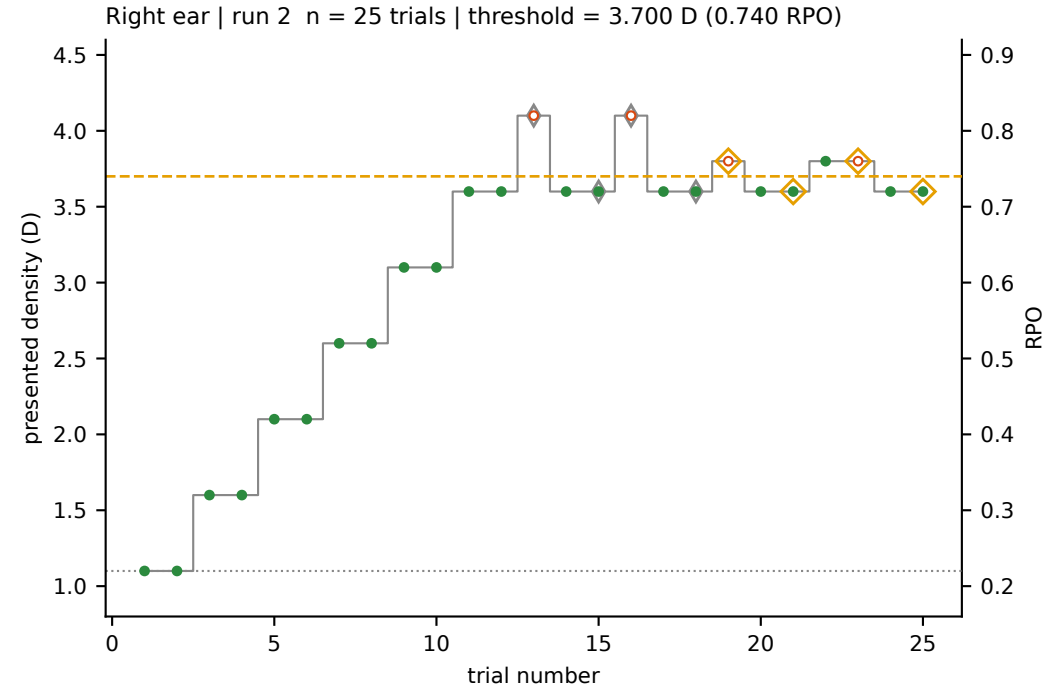
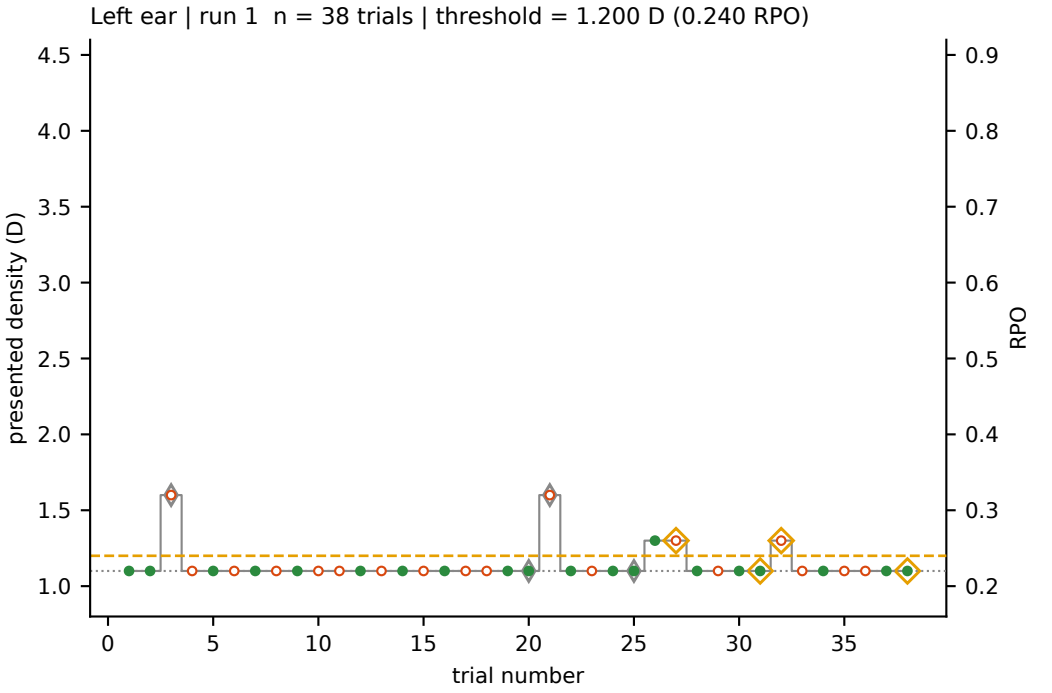
STRIPES | completed main runs | 2026-10-16 (KST)

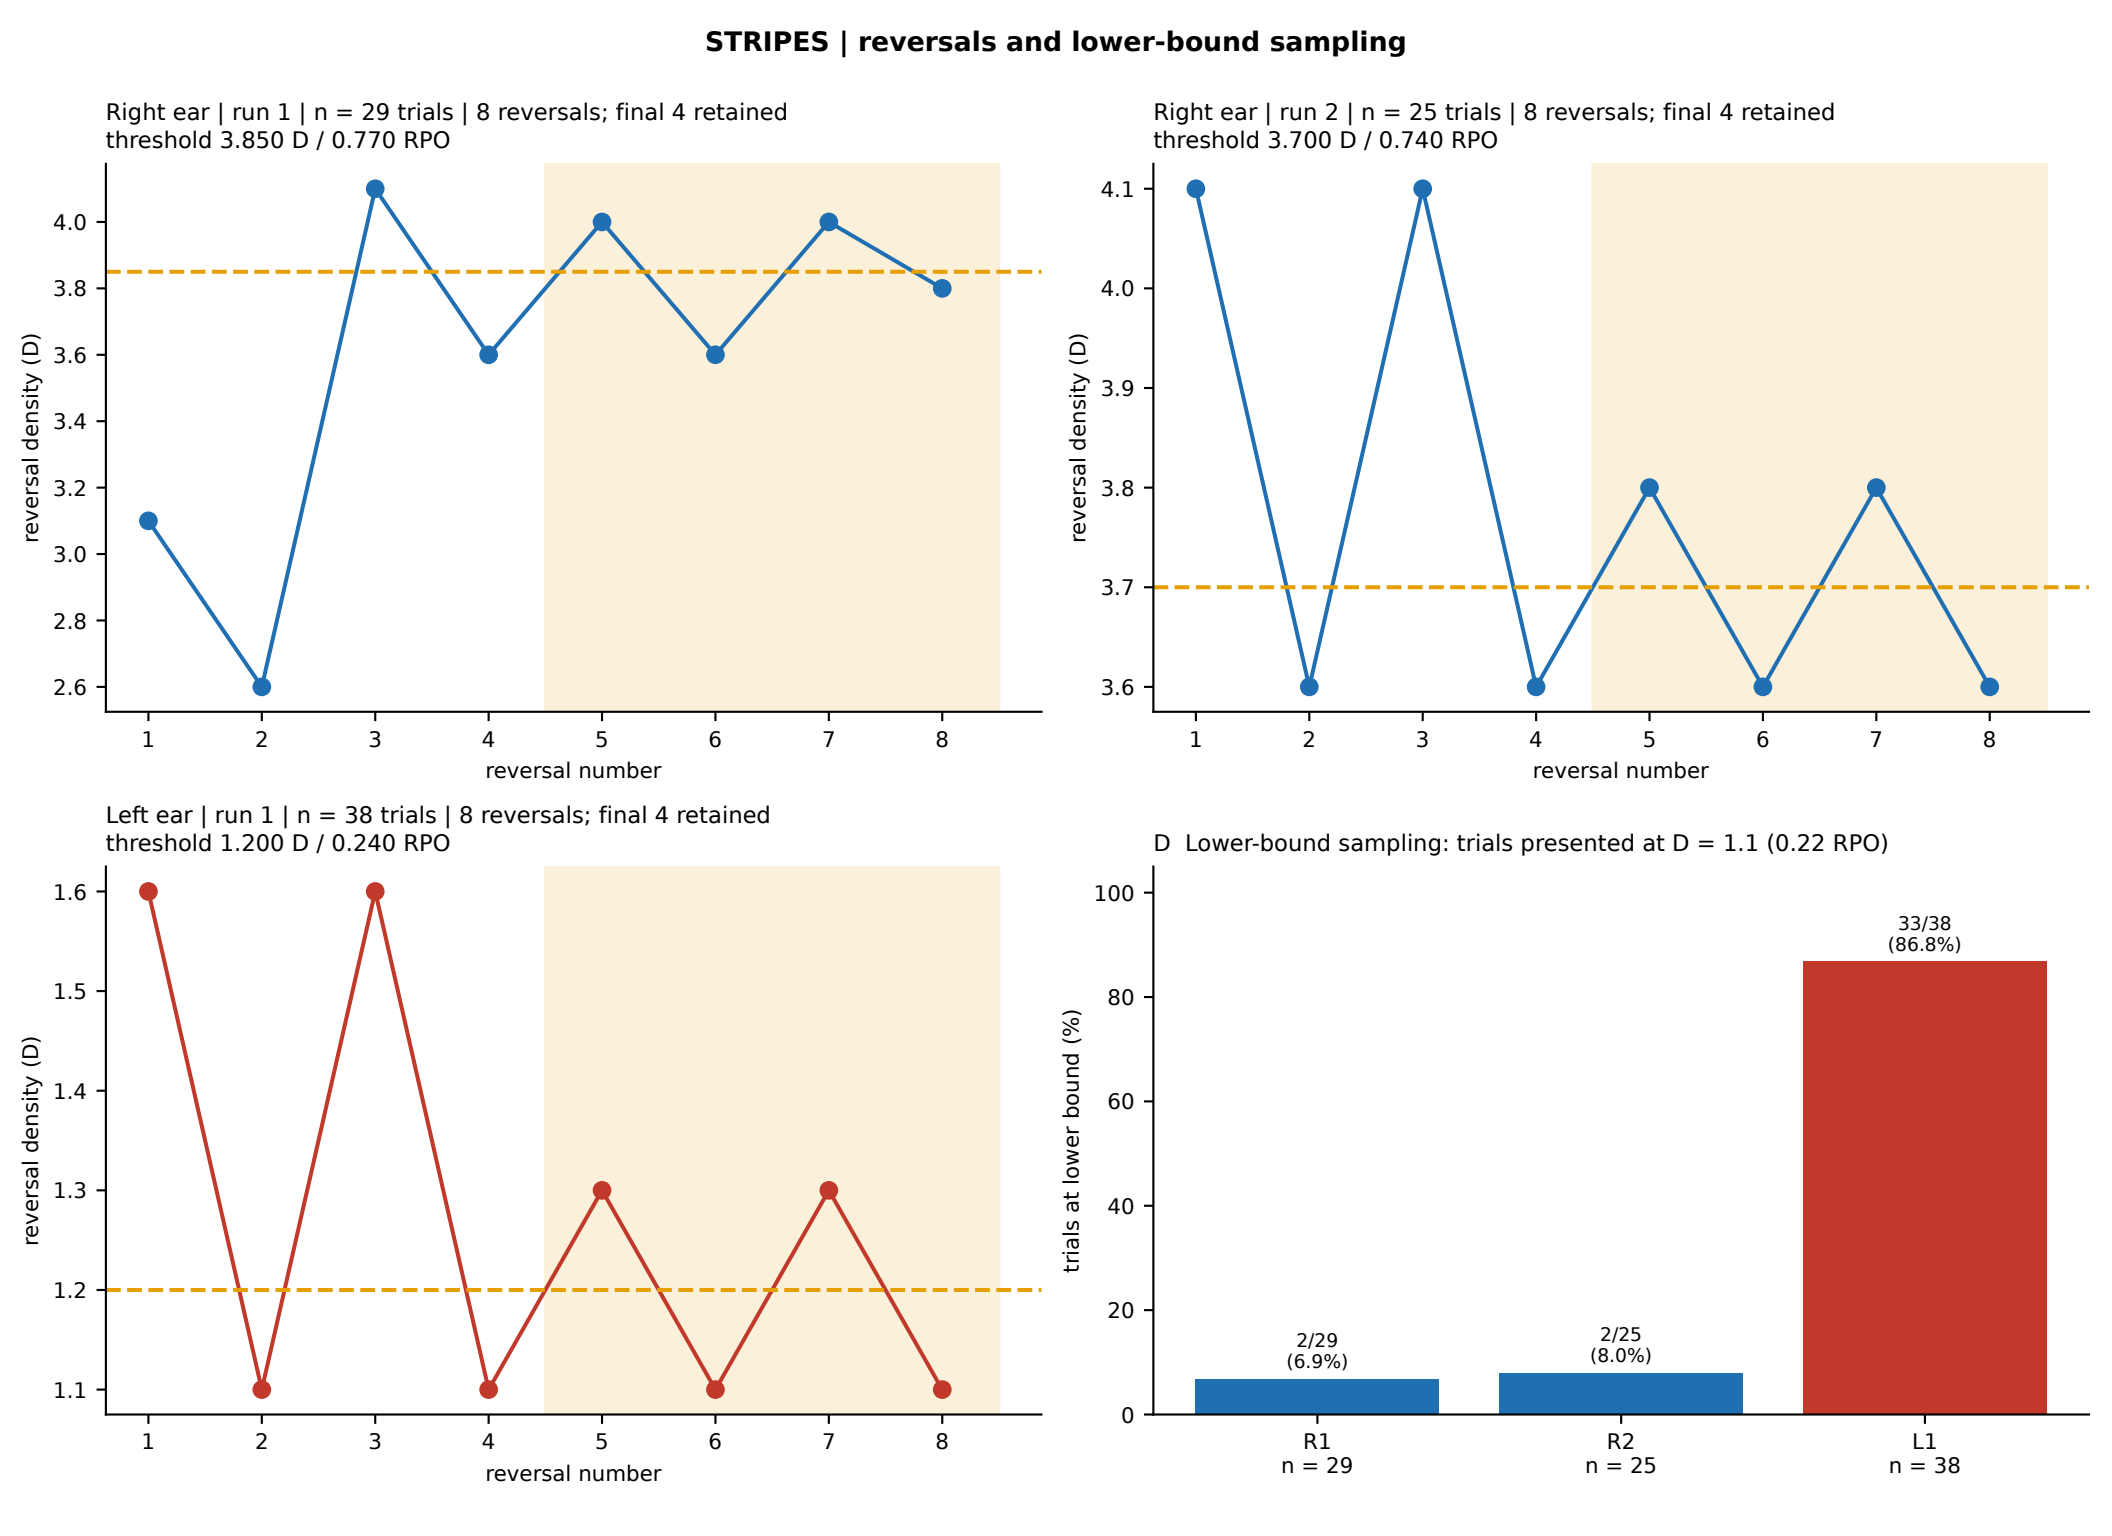




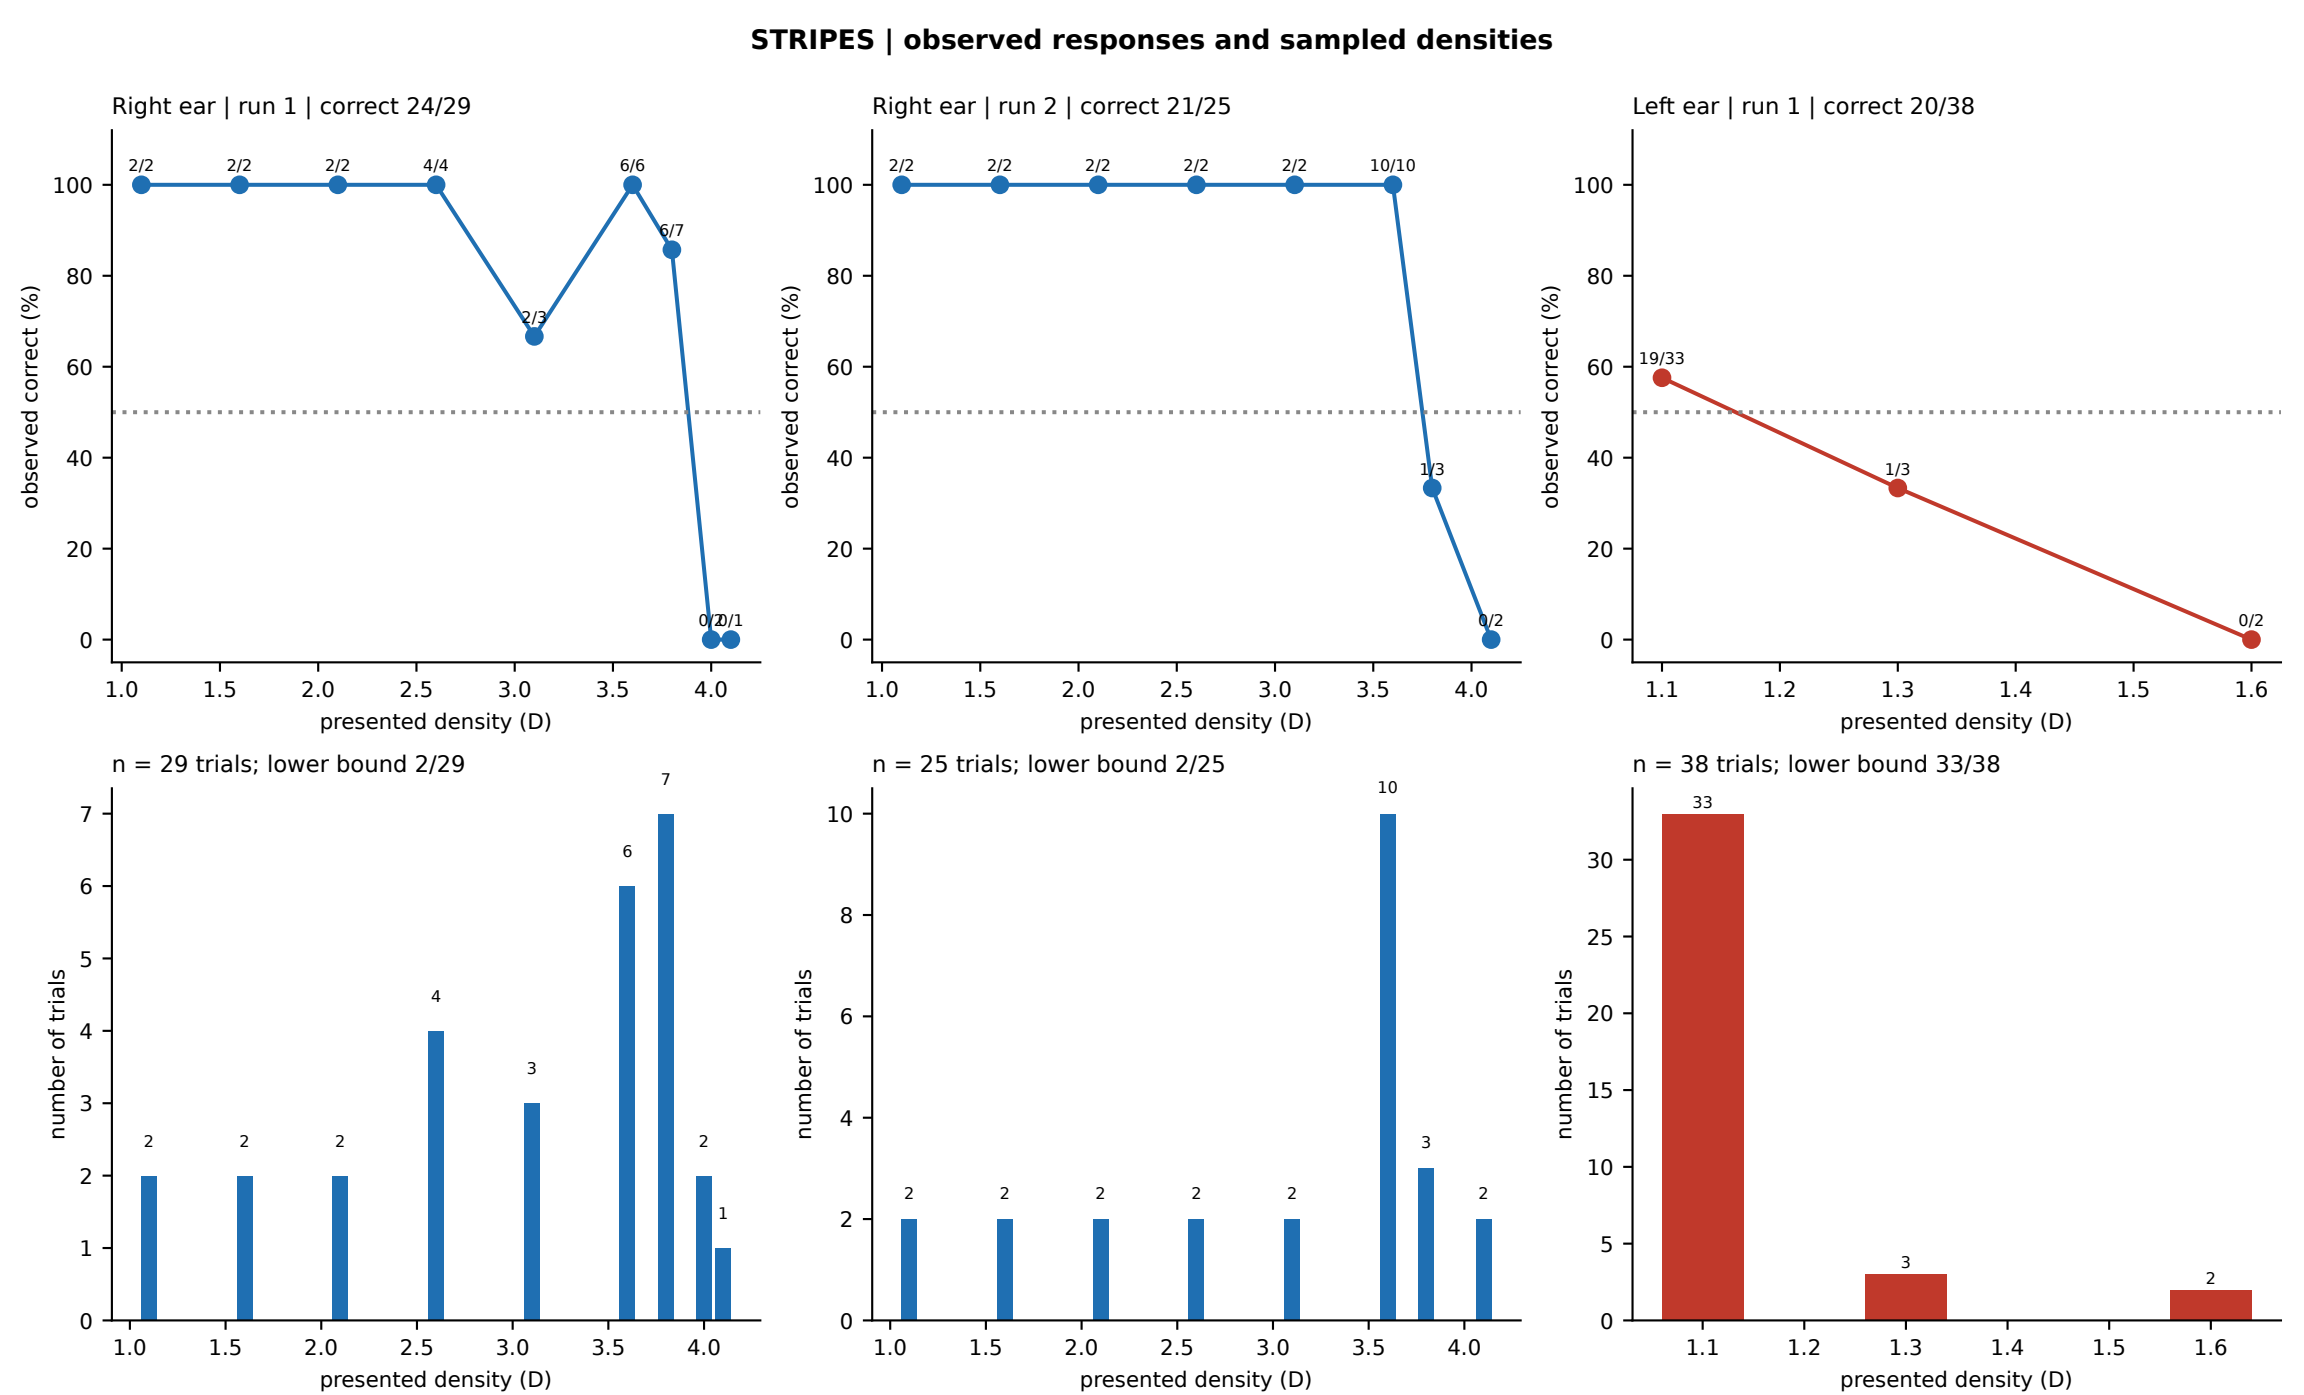




Threshold = mean of the final four reversal densities (recomputed from the trial CSV). RPO = D/5. Filled = correct, open = incorrect, diamonds = reversals (orange = the 4 used). * Left run: boundary-affected (app status analysis_window_bo



STRIPES | reversals and lower-bound sampling
Right ear | run 1 | n = 29 trials | 8 reversals; final 4 retained
threshold 3.850 D / 0.770 RPO
reversal density (D)
reversal number
Right ear | run 2 | n = 25 trials | 8 reversals; final 4 retained
threshold 3.700 D / 0.740 RPO
reversal density (D)
reversal number
Left ear | run 1 | n = 38 trials | 8 reversals; final 4 retained
threshold 1.200 D / 0.240 RPO
reversal density (D)
reversal number
D Lower-bound sampling: trials presented at D = 1.1 (0.22 RPO)
trials at lower bound (%)
2/29
(6.9%)
2/25
(8.0%)
33/38
(86.8%)
R1
n = 29
R2
n = 25
L1
n = 38



Labels: correct/total at each exact density. Chance 50 % (2 alternatives). Descriptive rates only; no psychometric fit.
